

Hi-Vis Spinner

By: Don Privett

Hook – Tiemco 100 sizes 10 - 22

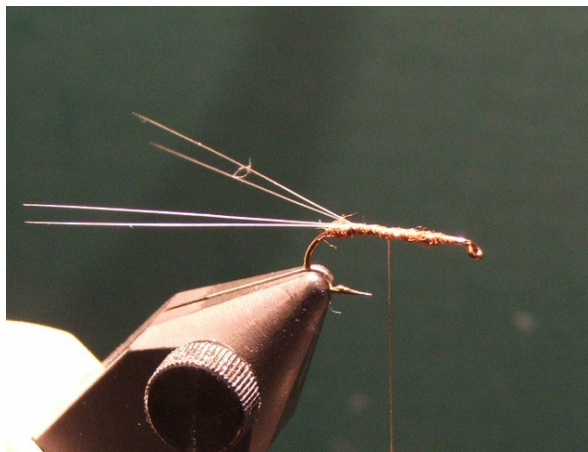

Thread – 8/0 color to match body

Tail - Micro fibetts

Body – Fine dubbing, choice of colors

Wing - Float-Vis white or dun

1. Start the thread at the eye and wind back to hook bend.
2. Form a small ball of dubbing at the bend of the hook to help divide the tail.

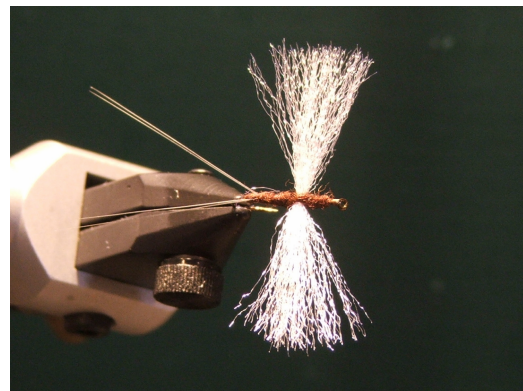

3. Tie in 3 or 4
Micro Fibetts in front of the ball of dubbing and position them to form a wide V.

4. Form a sparse body of dubbing to cover 3/4 of the hook shank.

5. Tie in the Float-Vis wing and secure with figure 8 wraps.

6. Add dubbing to cover wraps around and in front of the wing, and whip finish.

This is a versatile fly that can imitate most spinners simply by varying the color of the materials.
