

Rubber Legged Seducer

By: Don Privett

Hook	sz. 10-18 3xlong dry fly hook
Thread	6/0 Olive
Body	Black fine dubbing
Wing	Deer hair
Legs	Small olive rubber
Hackle	Light Dun
Thorax	Light olive fine dubbing

Step 1: Start thread and wrap back to bend of hook. Dub the thread and form body on rear 2/3 of the hook. Tie in the wind of deer hair so that it is about the same length as the hook.

Step 2: Tie in two rubber legs and separate into X-shape. Tie in one hackle feather between legs, then dub the thread and form the thorax. Leave room behind the eye to tie off the hackle and form a head.

Step 3: Wrap the hackle forward with two turns between the legs and 3 or 4 turns in front of the legs over the thorax. Finish with half-hitches or whip finish. Fish this fly as a Hopper, Caddis, Stonefly, or use as an indicator fly when using a dropper.
